Looking to make your business more energy efficient?

We'll help you reduce your impact on the environment and save you money

ActewAGL

ActewAGL's commercial energy efficiency services

We understand you want not only strategic advice but also the products, software and services to help your business operate sustainably.

Here's how we can help your business:

- identify potential energy savings via an energy audit
- assess and manage your ongoing carbon emissions
- provide ongoing equipment maintenance and servicing
- energy monitoring, analysis and reporting
- understand the impact of State and Federal Government policy
- provide compliance reporting (e.g. National Greenhouse and Energy Reporting System)
- assist with abatement certificate creation
- ensure safe, reliable and efficient operation of your energy equipment.

$35,000 p.a.

Sustainable success story

Calvary John James Hospital

Problem: Calvary John James Hospital's hot water and steam boilers were neither safety compliant or energy efficient.

Solution: ActewAGL identified the risks and savings that could be made and installed new equipment.

Result: An energy saving of approximately $35,000 per year!

Benefits of ActewAGL's commercial energy efficiency services

Keeping it simple and tailoring energy management solutions to suit your business is what we do best.

You'll receive:

- total solutions from a local energy company
- expert advice and solutions to make your business sustainble, and save money
- tailored ongoing management that suits your business
- direct contact with our Commercial services team.

Energy efficient solutions to save money

Generator load testing and maintenance – ensure your back-up power source performs reliably and efficiently, so it's always business as usual.

Hot water programmed maintenance – help reduce your energy consumption with a maintenance schedule.

Insight software– our customised monitoring software gives you accurate financial grade reports of the energy and environmental performance of your business.

Power factor correction – maximise your site's power capacity and efficiency, lower your energy consumption and reduce the risk of power failure.
